

PULLED, SOLD BACK, REPACKAGED: THREE CRYPTO CARD GACHA SITES, JUNE TO SEPTEMBER 2026

Public research by @shady_oak1. Original thread:

https://x.com/shady_oak1/status/2106006294721429869. Data windows and method in section 6; the dataset is in section 5.

Contents: [Summary](#) · [1. Sold back to the house](#) · [2. Recycling](#) · [3. Pricing](#) · [4. Receipts](#) · [5. Data](#) · [6. Method](#) · [7. Disclosure](#)

SUMMARY

Courtyard, Collector Crypt and Phygitals sell randomized packs of graded trading cards with an instant cash buyback. This report uses public live pull feeds the sites publish, CardLadder values and sales, and public blockchain records.

Key findings

\$500+ PULLS	COURTYARD	COLLECTOR CRYPT	PHYGITALS
Sold back to the house	80.8%	95.9%	93.1%
Median time from pull to sell-back, seconds	50	9	20
Same slab pulled again by Sep 30	77.8%	95.8%	92.9%
Pulls per slab, average	4.2	15.0	11.4
Priced above CardLadder	61.1%	66.2%	55.8%

Sold back, on-chain: Courtyard, first exit of all 28,009 pulls to its buyback wallet, Jun 24 to Sep 23; Collector Crypt, a 1,000-pull sample (± 3.1 pts), and Phygitals, all 6,927 pulls, Jun 24 to Sep 15. Pulled again: pulls Jun 24 to Sep 15. Pulls per slab and priced above CardLadder: Jun 24 to Sep 30.

1. HOW OFTEN A PULL IS SOLD BACK TO THE HOUSE, AND HOW FAST

Most high-value pulls go straight back to the operator, usually within a minute.

Definition. "Sold back to the house" means the operator paid the puller USDC for the card and the card's token went back to the operator's wallet in the same transaction, or, for Collector Crypt sell-backs before delivery (below), never left it.

Courtyard (Polygon)

- **Coverage:** we read the token transfers of all 28,009 Courtyard pulls priced \$500+ from Jun 24 to Sep 23, as of Oct 1.
- **First exit:** a sale to Courtyard's buyback wallet for 80.8%, a transfer to Courtyard's redemption wallet for 14.3%, and 5.0% were still held.
- **Speed:** sell-backs came a median 50 seconds after the pull (p25 23 s, p75 4.3 min). 54.0% came within 1 minute, 86.8% within 1 hour and 94.0% within 24 hours.

- **Timing precision:** times are interpolated from block numbers, ± 2 s.
- **Payouts:** the 22,626 sell-backs paid \$24.8M in USDC, gross.
- **Check:** 400 of 400 random cases matched Courtyard's own transaction history.

Collector Crypt and Phygitals (Solana)

- **Coverage:** for pulls from Jun 24 to Sep 15, we read on Oct 8 the outcome of every \$500+ Phygitals pull and of random samples of the other three tiers (method in section 6).
- **Sell-backs before delivery:** on 384 of 1,000 sampled \$500+ Collector Crypt pulls (38%), the card never left the vault: the puller paid for the pack and the payout wallet paid them back at the published rate seconds later (median 2 s, timed from the pack payment).

All sites, by price tier

SITE AND PRICE TIER	PULLS READ	SOLD BACK TO THE HOUSE	MEDIAN TIME TO SELL-BACK (P75)	WITHIN 1 MIN / 1 H / 24 H	MEDIAN PAYOUT, % OF PULL PRICE
Courtyard, \$500+	all 28,009	80.8% (first exit)	50 s (4.3 min)	54.0% / 86.8% / 94.0%	84.6%
Collector Crypt, \$500+	1,000 of 68,891	95.9% ± 3.1	9 s (23 s)	89.3% / 98.8% / 100.0%	93.0%
Collector Crypt, \$300 to \$499	400 of 17,368	94.5% ± 4.8	18 s (36 s)	81.7% / 95.8% / 98.4%	90.0%
Phygitals, \$500+	all 6,927	93.1%	20 s (51 s)	76.9% / 95.7% / 98.9%	90.0%
Phygitals, \$100 to \$499	400 of 27,758	95.5% ± 4.9	17 s (31 s)	86.9% / 97.9% / 99.2%	90.0%

Margins. 95% intervals, in percentage points. The Phygitals \$500+ row covers every pull, so no margin applies. Timing shares are of the pulls that were sold back.

MOST \$500+ PULLS GO STRAIGHT BACK TO THE HOUSE

The first thing that happened to each pull, read from public blockchain records.

☒ Sold back to the house ☒ Redeemed or shipped ☒ Moved or sold to another user ☐ Still held

Sold back = the slab returned to the operator's wallet, or never left it, and the operator paid the puller USDC. Courtyard: all \$500+ pulls Jun 24 to Sep 23, read Oct 1. Phygitals: all \$500+ pulls Jun 24 to Sep 15. Collector Crypt: random sample of \$500+ pulls, Jun 24 to Sep 15. Solana read Oct 8.

@shady_oak1 · Oct 2026

Chart 1. First exit of \$500+ pulls: all Courtyard pulls Jun 24 to Sep 23; all Phygitals pulls and a sample of 1,000 Collector Crypt pulls (±3.1 pts), Jun 24 to Sep 15.

MOST SELL-BACKS HAPPEN WITHIN A MINUTE

Share of sold-back \$500+ pulls that were sold back within each time after the pull. Time axis is logarithmic.

Courtyard: mint block to buyback block, block-interpolated (±2 s). Collector Crypt (sample) and Phygitals (all pulls), Jun 24 to Sep 15: pull transaction to sell-back transaction; Collector Crypt sell-backs before delivery are timed from the pack payment. Sell-backs in the same second are plotted at 1 s.

@shady_oak1 · Oct 2026

Chart 2. Time from pull to sell-back for the \$500+ pulls that were sold back, on a log time scale. Collector Crypt sell-backs before delivery are timed from the pack payment.

Published rates. The cash paid back matched a fixed share of the site's own pull price.

- Collector Crypt: 93%** on its \$1,000 Grail pack, the most common rate on \$500+ pulls.

- **Phygitals: 85, 90, 92 or 100% by pack.** 90% was the most common on \$500+ pulls, as the site showed its rates on Jul 8. The Black and Diamond packs were at 100% as of Oct 3.
- **Courtyard: 84.6%,** the rate paid on-chain on 81% of \$500+ sell-backs.
- **Paid exactly the pack's published rate:** all sampled Collector Crypt sell-backs. On Phygitals, 96.5% of \$500+ sell-backs, and 99.8% from Jul 1 on (some late-June packs paid 85%, then 90%).

Courtyard snapshot, all price tiers

Snapshot. A rolling 6-hour window of Courtyard's public pull feed, 07:52:12 to 13:52:20 UTC on Oct 8, 2026.

- **Counted:** the 4,748 pulls at least 2 hours old (created 07:52:12 to 11:52:18 UTC).
- **Outcome:** 79.0% had been sold back and 1.6% redeemed.

PULL PRICE	PULLS	SOLD BACK	REDEEMED
\$0 to \$25	2,578	81.4%	0.8%
\$25 to \$100	1,862	76.8%	2.3%
\$100 to \$500	252	72.6%	4.8%
\$500+	56	73.2%	1.8%

2. RECYCLING: THE SAME CARD, SOLD AGAIN

A card that is sold back is repackaged and sold again, many times.

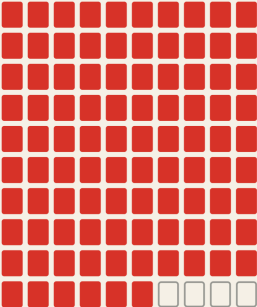

- **Matching:** by the slab's grading cert number.
- **Sold back first:** in the Collector Crypt and Phygitals on-chain samples, 99.4% of pulls whose slab was pulled again later had first been sold back to the house.

\$500+ PULLS, JUN 24 TO SEP 15	COLLECTOR CRYPT	PHYGITALS	COURTYARD
Pulls	68,891	6,927	26,210
Same slab pulled again by Sep 30	95.8%	92.9%	77.8%

MOST CARDS END UP BACK IN A PACK

Each tile is 1% of \$500+ pulls from Jun 24 to Sep 15. Red: the same slab was pulled again by Sep 30.

 COLLECTOR CRYPT

95.8%

pulled again by Sep 30
of 68,891 \$500+ pulls

 phygitals

92.9%

pulled again by Sep 30
of 6,927 \$500+ pulls

 Courtyard

77.8%

pulled again by Sep 30
of 26,210 \$500+ pulls

Matched by grading cert number. Re-pulls not in the dataset are not counted, so these shares are minimums.

@shady_oak1 · Oct 2026

Chart 3. Share of \$500+ pulls (Jun 24 to Sep 15) whose slab, by cert number, was pulled again by Sep 30.

Pulls per slab, Jun 24 to Sep 30

	COLLECTOR CRYPT	PHYGITALS	COURTYARD
Average pulls per \$500+ slab	15.0	11.4	4.2
Median gap between two pulls of the same slab	20.4 h	13 h	30 h
Most-pulled slab	Aquapolis Tyranitar PSA 8 (105 pulls by 66 accounts)	Chinese 1st Edition Raichu PSA 8 (160 pulls)	Potion Energy PSA 9 (56 pulls)

Caveat. Re-pulls not in the dataset are not counted, so these are minimums.

THE SAME SLAB IS SOLD MANY TIMES

Average pulls per \$500+ slab, matched by cert number, and the median gap between consecutive pulls.

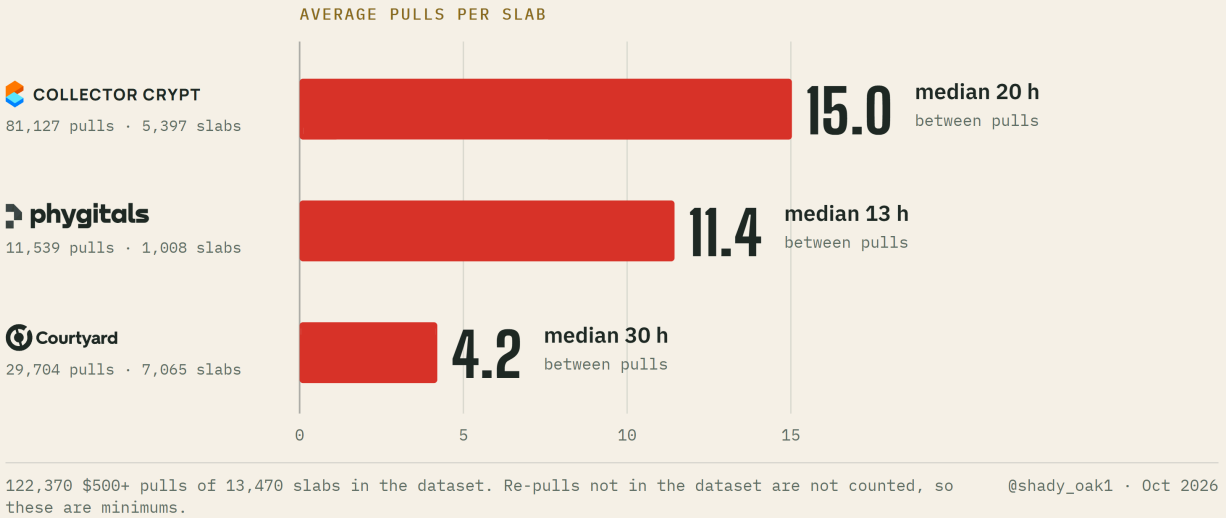

Chart 4. Average pulls per \$500+ slab in the dataset and the median gap between pulls of the same slab, Jun 24 to Sep 30.

ONE CARD, SOLD OVER AND OVER

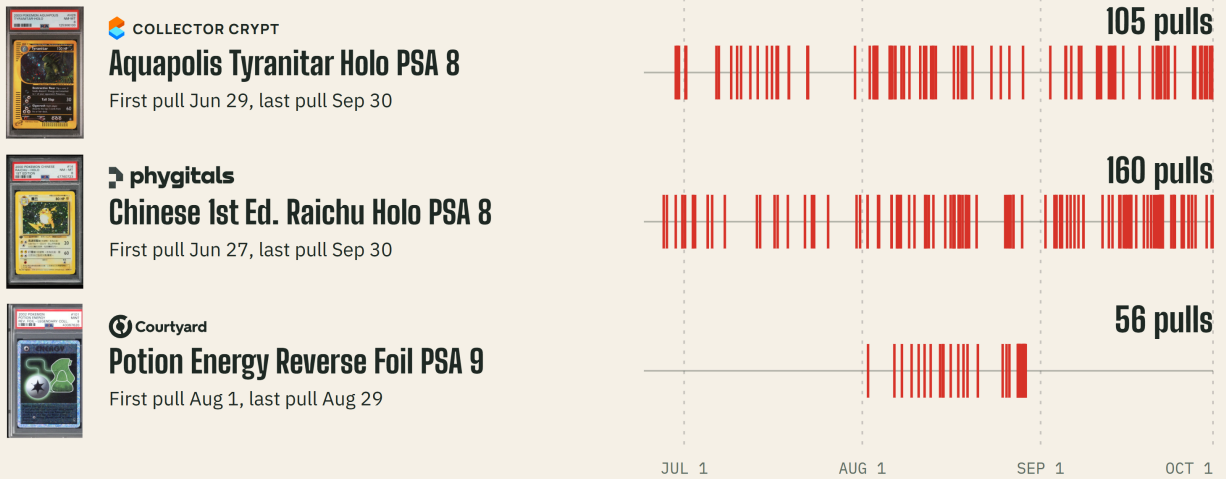

Chart 5. Every pull in the dataset of the most-pulled \$500+ slab on each site, Jun 24 to Sep 30.

Compared with a local card shop. The comparison can be checked against the data.

- **In a shop:** a buy-back and a resale are two separate transactions on a physical card that changes hands.

- **In this data:** over three months, a \$500+ slab was pulled 15.0 times on Collector Crypt, 11.4 times on Phygitals and 4.2 times on Courtyard, with a median gap of 20, 13 and 30 hours between pulls.
- **Back to the house:** the typical pull went back in 50 seconds on Courtyard, 9 seconds on Collector Crypt and 20 seconds on Phygitals.
- **Redemption or shipping:** few \$500+ pulls went there first (first exits, as in Chart 1): 14.3% on Courtyard, 2.4% in the Collector Crypt sample and 4.5% on Phygitals.

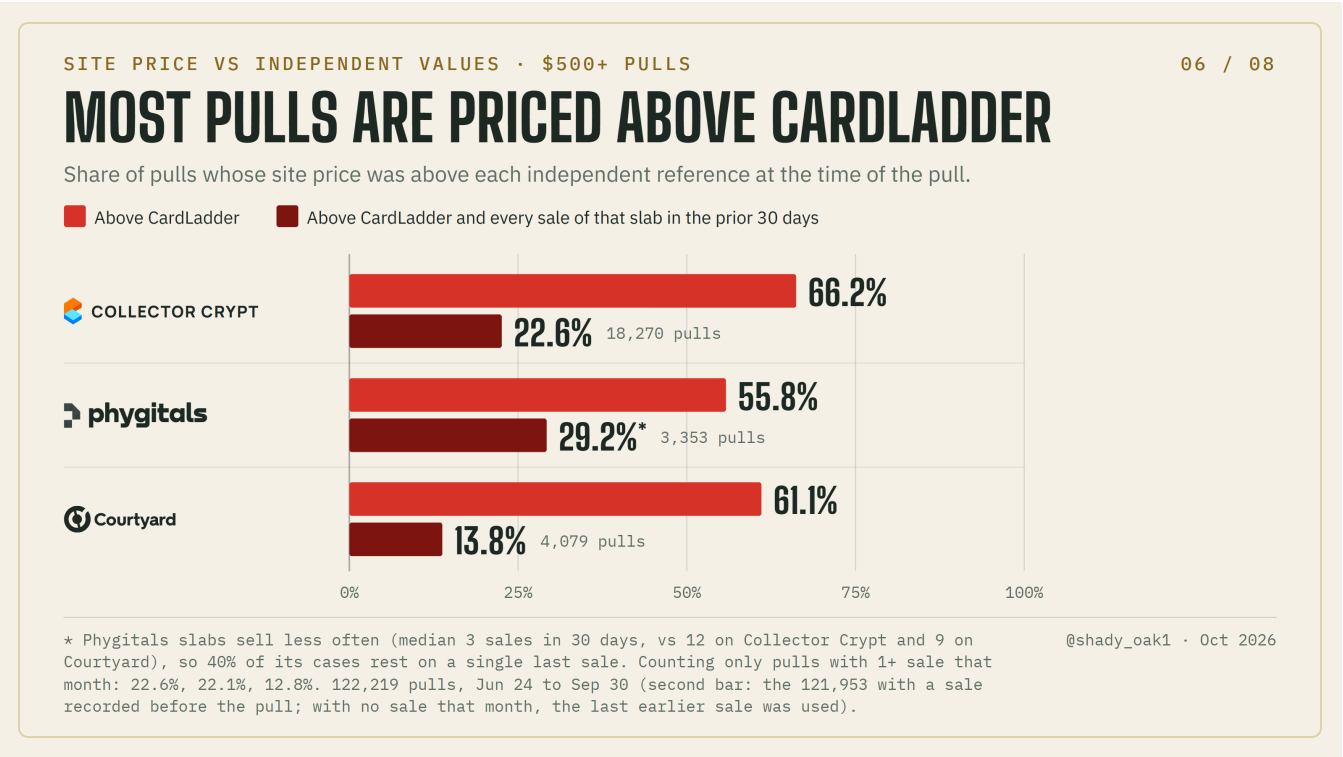

3. PRICING VERSUS THE MARKET

The price printed on a pull sits above independent values more often than below, and the instant buyback paid a fixed share of that price.

\$500+ PULLS, JUN 24 TO SEP 30	COLLECTOR CRYPT	PHYGITALS	COURTYARD
Priced above CardLadder's value for that cert	66.2%	55.8%	61.1%
Priced above CardLadder and above every sale of that slab in the 30 days before the pull	22.6% (18,270)	29.2% (3,353)	13.8% (4,079)

Base: 122,219 pulls; for the second row, the 121,953 with at least one sale recorded before the pull (pull counts in parentheses).

Caveat. The Phygitals 29.2% is inflated by thin sales. Its slabs had a median of 3 sales in those 30 days, against 12 on Collector Crypt and 9 on Courtyard, and 40% of its cases rested on a single last sale. Counting only pulls with at least one sale that month, the shares are 22.6%, 22.1% and 12.8%.

Forward test. A forward test avoids any lag in CardLadder. For pulls from Jun 24 to Sep 23, it compares the site price with the median sale of the same cert in the next 7 days.

SITE PRICE ABOVE THAT MEDIAN SALE	COLLECTOR CRYPT	PHYGITALS	COURTYARD
Share of pulls	75.5%	55.1%	66.9%
With 3+ sales that week	81.1%	57.0%	68.0%

On those 3+ sale cases:

	COLLECTOR CRYPT	PHYGITALS	COURTYARD
Average miss, site price	16.4%	12.2%	9.2%
Average miss, CardLadder	8.1%	11.2%	9.9%
Average miss, median of last 5 sales	6.7%	9.3%	7.7%
Typical signed miss, site price	+9.1%	+2.1%	+3.7%
Typical signed miss, CardLadder	+0.7%	0.0%	+0.7%

Courtyard came out best of the three: its average miss was slightly smaller than CardLadder's, though it still leaned high.

Market drift. Prices of these slabs fell over the quarter. For the same \$500+ slab, median sale Jul 1 to 14 against Sep 10 to 23 (3+ sales in each):

	TYPICAL CHANGE	SLABS	SHARE THAT WENT UP
Collector Crypt	-10.5%	658	23.1%
Phygitals	-6.2%	52	42.3%
Courtyard	-5.2%	103	40.8%

Phygitals pricing, checked Oct 3 to 6, 2026

- **Source of the price:** the price on a Phygitals pull matched the value its card page shows as "FMV by ALT".
- **Not refreshed while the house held the card, in our checks:** 96% of 298 house-held cards still carried their last pull value, and 98% of re-pulls since September showed the identical value.
- **Distance from ALT's live value:** pull values sat a median 14% away, in both directions.
- **Round-number chase values:** some chase cards carry round-number values far above their own page's price history. The 1st Edition Gyarados PSA 10 page shows \$56,000 next to its own price history of \$25,214.

The buybacks in section 1 paid a share of this site price, not of an independent value.

4. ON-CHAIN RECEIPTS

A sell-back is visible on public blockchains as a transfer to the house wallet plus a USDC payment to the puller, and payouts can land far from independent values in both directions.

(a) Phygitals: Dark Slowbro CGC 10, Black Pack ("100%" buyback)

- **Bought back:** \$1,551.71 on Sep 15 and again on Sep 17.
- **ALT's price history those days:** \$3,174.78 and \$3,161.05.
- **CardLadder:** \$3,120.
- **Transactions:** [Sep 15](#), [Sep 17](#).

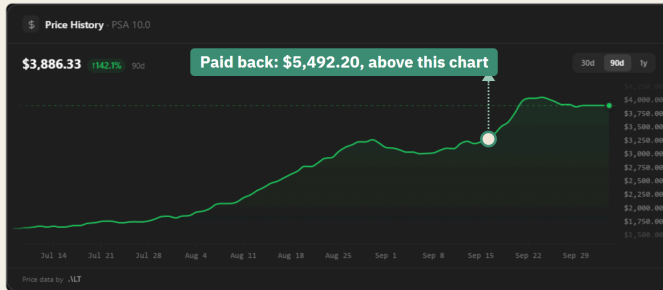

Receipt (a). Phygitals card page and Solscan, captured Oct 3, 2026; user names and wallets blurred.

(b) Phygitals: Caterpie PSA 10, Black and Diamond Packs

- **Bought back:** \$5,492.20, twice on Sep 16.
- **ALT that day:** \$3,260.10.
- **CardLadder:** \$4,131.
- **Transactions:** [Black Pack](#), [Diamond Pack](#).

@shady_oak1

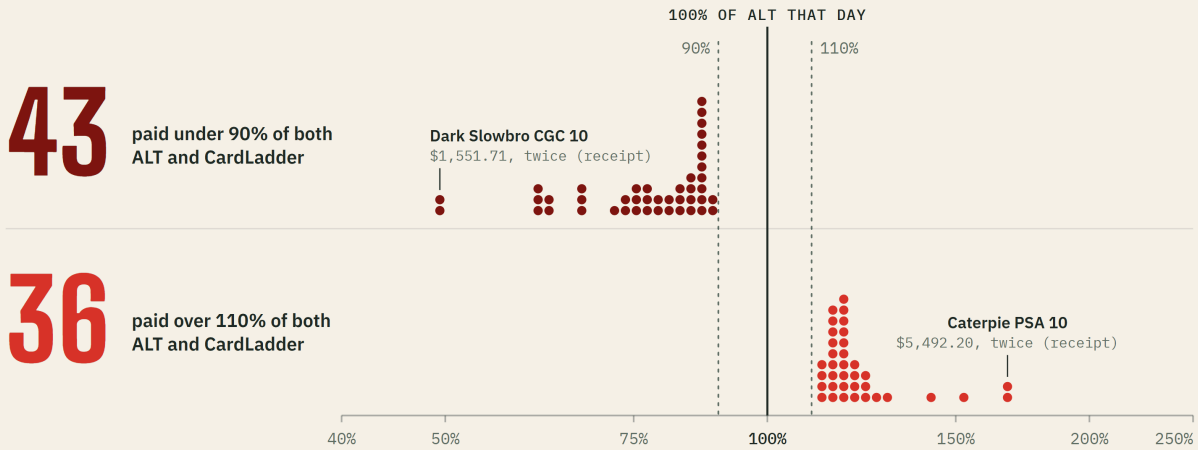

Receipt (b). Phygitals card page and Solscan, captured Oct 3, 2026; user names and wallets blurred.

Both ways. 641 recent Black and Diamond Pack "100%" buybacks (the latest 5 activity entries per card, read Oct 3, 2026):

- **Far from value:** 43 paid under 90% of both ALT that day and CardLadder, and 36 paid over 110% of both. Only cards where the two references agree within 25% are counted.
- **Speed:** the median sell-back came 15 seconds after the pull (588 with timing).
- **Payout:** it equaled the pull value recorded at pull time within 0.5% in 548 of 588.

A "100%" BUYBACK CAN MISS VALUE BOTH WAYS

Each dot is one buyback, placed by its payout as a share of ALT's value for that card on the day it was paid.

Of 641 recent Black and Diamond Pack buybacks (latest 5 activity entries per card, read Oct 3, 2026). @shady_oak1 · Oct 2026
Counted only where ALT and CardLadder agree within 25%. Log scale.

Chart 8. Phygitals "100%" buybacks paid under 90% or over 110% of both ALT and CardLadder, of 641 recent Black and Diamond Pack buybacks.

(c) Collector Crypt: 2011 Pokémon Call of Legends Entei Holo #SL3, PSA 8, \$1,000 Grail pack

- **Pulled:** from the vault HiGHqwYddP5N2waqUmXPdaASpMpUEvfqPr2fSawctEb on Jun 30, 2026 at 07:15:38 UTC.
- **Sold back:** 17 seconds later, at 07:15:55 UTC. The slab returned to that vault.
- **Payout:** the payout wallet GachaNgyXTU3zFogQ8Z5jR2BLXs8215X2AtEH18VxJq3 paid 674.25 USDC in the same transaction: 93% of the \$725.00 pull price, the published rate.

phygitals_value_checks_oct.csv	604	Phygitals card value check, Oct 3 or Oct 6
market_drift.csv	813	\$500+ slab with 3+ sales in both Jul 1 to 14 and Sep 10 to 23
charts/, tables/		the numbers shown in each chart and table

- **Cleaning:** removed 19 duplicate feed events (12 on Collector Crypt, 7 on Courtyard). Every count in this report and its charts is taken from the cleaned files.
- **License:** our data is CC BY 4.0. CardLadder and ALT values are their owners' estimates, included so the figures can be checked.

6. METHOD AND LIMITS

Data

- The figures come from public live pull feeds the sites publish, CardLadder values and sales, and public blockchain records.
- Each pull in the dataset carries the site's price, the slab's grading cert number (used to match re-pulls), and CardLadder's value and sales for that cert at pull time.
- The dataset covers:
 - Courtyard \$500+ (Pokémon, One Piece; PSA, BGS)
 - Collector Crypt \$300+ (Pokémon; PSA)
 - Phygitals \$100 to \$10,000 (Pokémon; PSA, BGS, CGC)
- Cross-site comparisons use \$500+ pulls.
- Coverage begins Jun 24 on Courtyard and Jun 26 on the other two.
- The dataset is published in data/ (section 5).

Windows

FIGURE	WINDOW
Sell-backs	Courtyard pulls Jun 24 to Sep 23 (read Oct 1); Collector Crypt and Phygitals Jun 24 to Sep 15 (read Oct 8)
Pulled again	Pulls Jun 24 to Sep 15, re-pulls through Sep 30
Pulls per slab and priced above CardLadder	Jun 24 to Sep 30
Forward test	Pulls Jun 24 to Sep 23, sales in the next 7 days
Market drift	Jul 1 to 14 against Sep 10 to 23
Phygitals checks	Oct 3 to 6

Courtyard on-chain

- **Pulls:** each Courtyard pull appears on Polygon as a token minted to the puller.

- **First exit:** we classified each pulled token's first exit as a transfer to the buyback wallet 0x66dbff2ce099d19b4e8c5dc8b254ec7aeaf5e642 or to the redemption wallet 0x64ecc7f2753df33e21f7c4211ea2b68b608bf8f9. Tokens with neither were counted as still held.
- **Timing:** block numbers were converted to clock time by interpolation between weekly reference blocks (± 2 s). Time to sell-back runs from mint block to buyback block.
- **Check:** 400 of 400 random cases matched Courtyard's own transaction history.

Collector Crypt and Phygitals on-chain

- **Sample:** we drew a fixed-seed random sample in each tier, then read all 6,927 Phygitals \$500+ pulls. The 1,000-pull sample ($92.3\% \pm 2.9$) matched it pull for pull.
- **Leaving the house:** for each pull we found the Solana transaction, within minutes of the feed time, in which the card left the house (a Collector Crypt vault wallet, or the Phygitals wallet 62Q9eeDY3eM8A5CnprBGYMPSHdBjAzdpBdr71QHsS8dS).
- **Outcome:** the next change of holder, one of:
 - sold back (USDC paid by GachaNgyXTU3zFogQ8Z5jR2BLXs8215X2AtEH18VxJq3 or by 62Q9ee);
 - redeemed or shipped (Phygitals: sent to 6VhFyXwkgXmUdy2zNJUSBg5uDat9GTXyPjcCrY8n9DbA; Collector Crypt: the card's token burned, with a shipment memo);
 - moved or sold to another user;
 - or still held.
- **Sell-backs before delivery:** Collector Crypt pulls with no card transfer were matched, on the puller's own history, to a payout of exactly the pull price times the pack rate.
- **Timing:** the gap between the two block times.
- **Checks:** 40 of 40 sampled results matched when each pull and outcome transaction was re-read and decoded independently. 99.4% of sampled pulls whose slab appeared in a later pull in the dataset had first returned to the house. None were left unresolved.

Limits

- Re-pulls not in the dataset are not counted, so recycling figures are minimums.
- CardLadder and ALT values are estimates.
- Thin Phygitals sales inflate its "above every recent sale" share (section 3).
- Pulls of the same card are correlated, so the simple-random-sampling margins are approximate.
- The Courtyard snapshot is a single 6-hour window, and the Oct 3 to 6 Phygitals checks are point-in-time.
